Name: Gordon Foo A0199554L

Link: https://github.com/gordonfgz/CS3219_OTOT_A3.git

I followed instructions from

https://kubernetes.io/docs/tasks/run-application/horizontal-pod-autoscale-walkthrough/and set up the Dockerfile, index.php page and php-apache.yaml

```
PS C:\Users\gordo\OneDrive\Desktop\School\CS3219\OTOT_TASK_A3> kubectl get hpa
                                                                            REFERENCE
                                                                                                                                                                                                                                                                                  MINPODS

                                                                                                                                                                                                                                                                                            1
                                                                                                                                                                                                                                                                                                                                                                                                                   1
```

Initial commands to run:

kubectl apply -f components.yaml kubectl apply -f php-apache.yaml kubectl delete pod load-generator kubectl get hpa

Run this command in a separate terminal:

kubectl run -i --tty load-generator --rm --image=busybox --restart=Never -- /bin/sh -c "while sleep 0.01; do wget -q -O- http://php-apache; done"

After that, wait for abit and run kubectl get hpa again in a free terminal.

basic ingress:

```
! ingress.yaml X
 ingress-resource-backend.yaml
                               {} package-lock.json
                                                                      ndex.php
! ingress.yaml
     apiVersion: networking.k8s.io/v1
     kind: Ingress
     metadata:
        name: nginx-test
